

Managing Virtual Fence Risk on Your Operation

A decision resource

■ WHAT THIS IS

This page gathers a few practical tools to help you decide whether virtual fencing is a good fit for your operation. It does not tell you what to do. It helps you think it through, with clear information and real examples.

■ WHO IT IS FOR

Livestock producers, and the advisors who work with them, such as extension agents, NRCS staff, and grazing consultants.

■ WHAT IS ON THIS PAGE

Risk Mitigation Filter

A short worksheet you fill out to screen virtual fencing against your own conditions. It also shows you when a closer look with a deeper tool is worth your time.

Three case examples

Short accounts of three operations that worked through the same questions and reached three different decisions. They show that a careful "no," a "not yet," or a "let us test it first" can be the right call, just as much as a "yes."

■ BEFORE YOU DECIDE

Before changing how you fence or graze, investigate the risks, the costs, and the returns. Then talk it through with your advisors.

■ FINDING YOUR WAY

Start with the filter. Then read the cases that look most like your operation.
